

# air pollution

The global warming is the more big issue but he not is alone, there is in the eart air pollution, ocean pollution, animal in danger, deforestation, greenhouse effect, drawt, sea level rising, wilfire and many more. Today talk about air pollution.

## 1 cause

the reason of the pollution is using car, plane, the transport in the big city like china, india and USA. The first reason of the pollution is the people warking in the industries and usines. But also the methantion and the combustion the trash. The wilfire and the animal emissions, breeding.

CO<sub>2</sub>

The consequence in the earth is the climat change, the destuction of atmosphère, the air pollution kill many peoples, creat illness, 7 millions of people, the esperence of life reduce, animals and vegetation disappear , relass CO<sub>2</sub> in the atmoshere, the gaz reless of the using in not good the air.

## 2 Conséquence

## 3 Sollution

The sollution of this problème, we can building green city reduce industrie, could using bike, convention of the cheminy open (ban), may planting trees, rduse consomation of the meat and the animals in general. Would creat a convention for électric car and the gazol car ans pollution of atmophery, should use energy ruse
