## 2020 Bell 505 SN65186

The **Bell 505 / SN 65186** is an early 2019 dataplate. With the aircraft being flown for additional hours apart from the test and certification flights (making it total 19 flight hours), the Bell airframe warranty is still only going to be activated with the aircraft delivery. I have also spoken to Safran and they have agreed to extend the warranty coverage under the 5star plan with the discount of 30% of the flight hour rate during the first two years of the aircraft operation.
