Job offer: Student – Software Development C++

At KONVOI we develop a mobile, preventive security system for parked trucks in road freight traffic. With optimized radar sensors, we create a detection area around the truck, which enables us to recognize movement patterns of unwanted persons and to initiate targeted danger prevention measures. For the software development of our security solution we include many product components, so that a versatile topic area opens up for you. We are currently working on several customer projects in a communicative, nine-person team and need your support!

Your tasks & skills:

- The desire to learn new things and to reach your limits (just like us by the way)

- Analysis and application development close to our customer requirements

- Knowledge of object-oriented programming, ideally with C++

- Knowledge of CMake is a plus

- Creativity and solution-oriented thinking are your thing

What we have at KONVOI:

- Fun in daily work routine, which is mainly determined by many degrees of freedom (our great drive)

- Establishing a young, dynamic company with its own culture

- Excitement for new things and openness for change

- Transparent communication and honesty are our strenghts

- Open offices and all the benefits of the start-up network StartUp Dock

Ideally, you're up for trying your hand in an independent, super fun team and to complete an internship or working-student program as part of your studies. Just get in touch with us with an email, via WhatsApp or call us directly. We look forward to hearing your story and your interest in joining us. We would be happy to introduce you to KONVOI and look forward to hearing from you.
