Procedure to validate your S2S

1. If you wish to send us an S2S message as a financial institution connected with the banking system, please email us at admin@intfiba.com using only the business email address associated with your business page (no Gmail accounts or similar).

2. You will receive a
   a. "User Name" and an
   b. "Initial Password" when you register with our system.
   c. For future transactions, please change the initial password to a password of your liking.
   d. The "Security Key" – your signature- can be retrieved from your "Messages" board. Please copy it; it will only appear once.

3. You will receive as well in a separate message in your message board the
   a. "Server Address",
   b. your "Server Name" and the
   c. "Server Password" to connect through sFTP or SSH.
   d. Your "Server Name" and your "Server Password" will only be active for one transmission.

4. Transmission
   a. Securely share and add each server's public SSH key to the other server's authorized keys through the Messages board.
   b. Configure your Firewall, for instance open port 22 on both servers to allow sFTP or SSH traffic.
   c. Compare checksums after sending the S2S message.
   d. Please send your S2S message and sign at the end of your message with your bank officers name and your "Security Key."

5. If you want to send another S2S, you have to receive another "Security Key" for your following communication as well as a new "Server Password"; please get in touch with us at admin@intfiba.com. After that, you will be able to retrieve the new "Security Key" and "Server Password" in your Messages board.
