

Innovative Developments in Zinc Oxide Unveiled at In-cosmetics Global 2024

Uviva Technologies introduces revolutionary Eclipse® G1 Granules, a form of zinc oxide that simplifies the formulation process, setting a new standard for cosmetic ingredients.

FOR IMMEDIATE RELEASE

[Paris, FRANCE, 8-APRIL, 2024] - Uviva Technologies is proud to announce the launch of a new product set to revolutionize the way the cosmetics industry works with zinc oxide. Introducing Eclipse® G1 Granules, a game-changing innovation in working with zinc oxide, to be showcased at the in-cosmetics Global 2024 from April 16-18 at Booth 2F41.

Eclipse® G1 Granules offer an advanced ease of use: a free-flowing material that prevents dust formation when adding powder to mixing vessels, while maintaining the same exceptional quality and performance expected from Eclipse® zinc oxide. This innovative product marks the first of its kind in the market, setting a new standard for cosmetic ingredients.

The granulated form of Eclipse® G1 simplifies the formulation process without compromising on performance. The Eclipse® G1 granules are 100% zinc oxide, free from added additives, without compromising the end formula's composition.

"We are thrilled to introduce Eclipse® G1 Granules to the cosmetics and skincare industry," said Jeroen van den Bosch, Managing Director at Uviva Technologies. "This revolutionary product represents a long overdue advancement in zinc oxide technology. Combining ease-of use and prevention of dust formation without the need for working with dispersions is a revolutionary new way formulators can work with zinc oxide while maintaining full formulation freedom."

Mattia Battistin from Kalis, a seasoned formulator, commented on the significance of Eclipse® G1 Granules, stating, "Working with zinc oxide granules offers a seamless experience in formulation while delivering exceptional results. It's an advantage for formulators everywhere."

Samples of Eclipse® G1 Granules will be available for demonstration at Booth 2F41 during the in-cosmetics Global 2024 Tradeshow. Don't miss this opportunity to experience the future of zinc oxide cosmetics firsthand.
