

Installation Instructions - With Vico Marine Circle Cutter

1

Put your boat cover on your boat, and mark the location where you want to install the vent.
NOTE: The Boat Vent 3 should be located at the highest point of the cover.

2

The Circle Cutter comes with a cutting board. Place the cutting board under the canvas where you're about to cut.

3

Place the circle cutter over the center of your marked spot. Rotate the knob one full circle to achieve a perfect hole.
WARNING: Make sure your other hand is clear of the path of the blade.

4

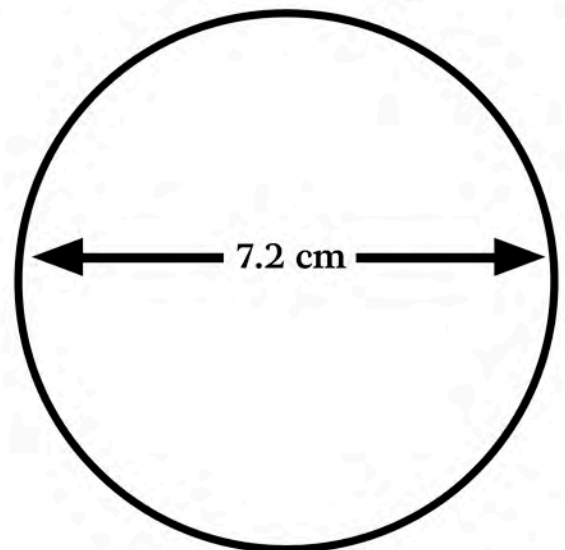

The newly cut hole should look like this.

5

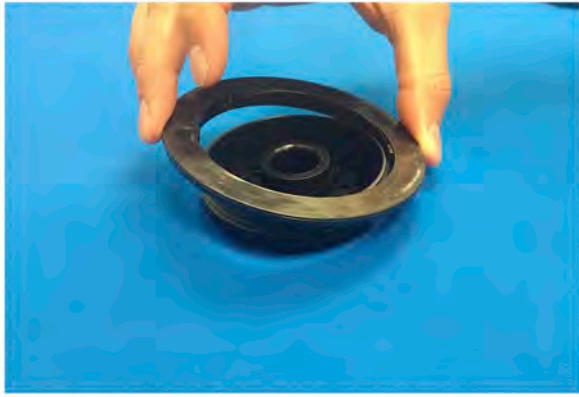

Put the body of the Boat Vent 3 into the hole. **NOTE:** Make sure the canvas is not covering the threads of the vent.

Installation Instructions - With Vico Marine Circle Cutter

6

Push the spiked washer snug against the canvas.

7

Screw the nut onto the vent. Make sure the side marked "Bottom" is facing up.

8

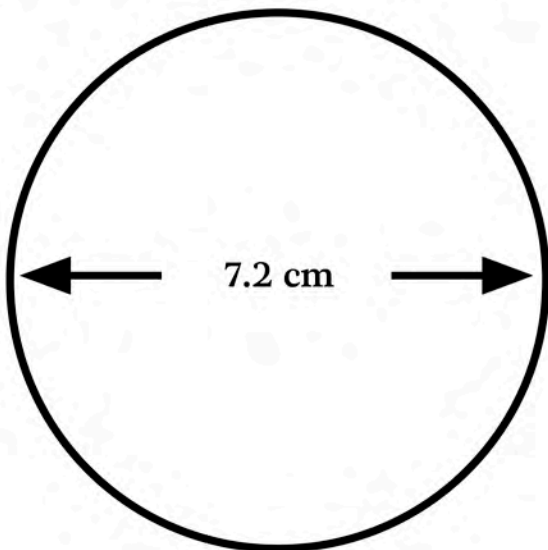

Tighten the nut as tight as possible. This will prevent it from falling off in the future.

9

We also sell a wrench for tightening the Boat Vent 3. This is the most reliable way to make sure the vent is completely tight.
