

Digitale Qualifizierung von Krankenschwestern- und Pflegeern zur Verwaltung der Telecare Dienste für die häusliche Fernüberwachung

Gemeinsam gestalten wir die Zukunft des Gesundheitswesens.

Why Telenursing?

Telenursing project is designed to fill in the need for strengthening the digital skills of healthcare professionals to operate routine practices remotely through Telecare. The core aim is to empower nurses, care givers, etc. with digital competencies to operate routine practices remotely through Telecare.

Telenursing training modules:

Our comprehensive training program includes five separate modules, each accurately designed to empower healthcare professionals with the crucial skills required for remote patient care. These modules are structured to provide a general learning experience, with reading materials, instructional videos, and practice sessions. At the conclusion of each module, you'll have the opportunity to put your knowledge to the test through an assessment, ensuring a full understanding of the material.

NR	Module Titel	Description
1	Introduction to Tele Care technologies	This module gives you an overview on existing technologies and covers necessary numerous monitoring devices, and instructions on how to using them
2	Tele-Communication Skills	This module covers essential communication skills, including active listening, reflective listening, and empathic listening. It also explores the interactive communication techniques, video appointment, acuity screening, assessing patient readiness for telehealth etc.
3	Patient Assessment through Telecare	This module involves monitoring vital signs, pulse oximetry, spirometry, blood glucose levels, sleep patterns, and elder risk assessment.
4	Managing Acute Clinical Conditions through Telecare	This module includes topics like allergic-anaphylaxis, wound care, emergencies, ECG analysis self-monitoring, and mental health telecare.
5	Managing Chronic Clinical Conditions through Telecare	This module covers telecare for conditions like hypertension, type 2 diabetes, chronic heart failure, and chronic obstructive pulmonary disease/asthma
