

SICHER DURCH DIE NACHT...

Touch-up pencil
Afterglow paint
for metal, glass and plastic *
Luminescent - fast drying

The paint manufacturer Colux GmbH has a large portfolio of innovative and powerful luminous paints in its programme under the Coluxglow brand. This year, a new product expanded the range: the Neonglow paint stick. With this touch-up pen, the glow paints can be easily used anytime and anywhere. The 2-in-1 touch-up pencil has a fine writing and drawing lead and a small brush, which makes the touch-up pencil particularly versatile.

After presenting the paint pen at trade fairs in Leipzig and Berlin, we were surprised by the wide range of uses our customers discovered:

The fact that artists enthusiastically use the touch-up pencil to create luminous picture elements and to achieve strong effects through the light/dark effect has motivated us, as creative people have long been one of the most important target groups for Coluxglow luminous paints. What inspires them about the Neonglow paint pen is the clean and simple application of the luminous paint.

This user-friendliness also makes the Neonglow paint pen interesting for model making, as it is quick and easy to apply markings and lettering in many different situations.

One area of application that we had not even considered is the field of angling: anglers use the paint pen to mark lures made of hard plastic and metal that need to be visible in the dark or to mark the fishing line to identify the casting length. Since the luminous paint dries in minutes, you can apply the markings directly on site and use them immediately.

Boat owners and truckers use the luminous paint to mark gear knobs and levers to make it easier to see the setting in the dark.

People who are constantly looking for their misplaced mobile phone are pleased that a plastic mobile phone case labelled or painted with luminous paint can be found again even in the dark.

These are just a few examples of how the Neonglow paint pen is used. We are looking forward to seeing what creative ideas for new applications our visitors will come up with at the Creativworld fair in Frankfurt.

The product range of Coluxglow luminescent paints includes various neon and afterglow colours, in addition to the Neonglow touch-up pencil.

Luminescent and luminescent signal colours in the innovative paint pen 2in1 as brush and pen. Luminescent markings can be applied quickly and easily to many substrates.

Simply remove the cap to mark with the pen and unscrew it to use the brush. After use, the tip should be cleaned with universal thinner.

The paint adheres to all smooth and dry surfaces made of metal, glass and plastic.
