

Job offer: Intern for Embedded Software

At KONVOI we develop a mobile and preventive security system for parked trucks in road freight traffic. With optimized sensors we create a detection area around the truck, which enables us to analyze movement patterns of persons to potentially initiate security measures. Since October we have received the EXIST funding program of the BMWi and moved into our own office in the StartUp Dock of the TU Hamburg. Here we are currently working on the product development in a small, communicative team and need your support!

Your tasks & abilities:

- The desire to learn new things and to reach your limits *(just like us by the way)*
- Analysis and application development close to our customer requirements
- Basic knowledge of the programming languages C or C++ (and Embedded C)
- Prior experience with MatLab is a plus and advantage
- Independence and enthusiasm for change are important to you

What we have at KONVOI:

- Fun in the daily work routine, which is mainly determined by many degrees of freedom
- Building a young, dynamic company with its own culture
- Excitement for new things and openness to change
- Transparent communication and honesty are our strengths
- Interest in change for the logistics and security industry

Ideally, you feel like trying your hand in an independent, super fun team while tackling software projects with lots of question marks. Just get in touch with us via email, via WhatsApp or call us directly. We look forward to hearing your story and your interest in joining us. We would be happy to introduce you to KONVOI and look forward to hearing from you.

Your contact person: Heinz Luckhardt - 01639067060 - heinz.luckhardt@konvoi.eu - www.konvoi.eu
