Where the World Cooperates

The International University of Japan (IUJ) was created in 1982, as Japan's first graduate-school-only university, by bold leaders with a unique vision representing businesses, governments, and world organizations.

IUJ equips students with interdisciplinary skills in politics, economics, and management, as well as historical and cultural perspectives to take on current global issues in their chosen profession.

Offering an English-only curriculum to students from 70 countries taught by a highly qualified faculty, IUJ boasts master's and doctoral degree in two graduate schools:

- | GSIR - Graduate School of International Relations
- | GSIM - Graduate School of International Management

Multicultural Communities

With active interdisciplinary research initiatives and an interactive alumni network of more than 5,000 graduates from 143 countries and regions, IUJ is making effective use of our global outreach to link up world organizations, businesses, and governments both in and outside of Japan.

Short Introduction	By taking the basic courses for the IR degree, students acquire the basic concepts and theories of international relations, empirical knowledge, and analytical skills. All of these are necessary to understand the diverse aspects of international relations. In the PS program, students study topics such as comparative politics, political institutions, political theory and methodology, with a strong focus on methodology. They thereby acquire sufficient methodological skills to analyze diverse issues in political science. The IRP also offers various elective courses. Those courses seek to provide more advanced, specific, and up-to-date studies corresponding with the multi-disciplinary nature of the IR and PS fields. IRP students are expected to develop the capacity to analyze diverse global challenges and propose policy solutions for them. (https://www.iuj.ac.jp/gsir/irp/)	The ID track offers various development-related courses in economics, regional science, and related fields. Throughout the coursework, students learn how to evaluate current policies and design more effective policies to encourage economic growth and social development for developing countries. The ECO track puts emphasis on modern economic theories and their applications. Students learn applied macroeconomics comprising fiscal policy and international finance as well as empirical microeconomics including labor, health, and environmental issues to understand and analyze current issues. Both degree tracks aim to equip students with advanced knowledge and skills so that they will tackle and overcome the problems they are facing as new leaders in both public and private sectors. (https://www.iuj.ac.jp/gsir/idp/)	The PMPP provides students with knowledge and skills that are necessary to be good managers in public and non-profit organizations. Basic courses include Introduction for Policy Analysis, Public Policy Process, Statistical Methods, Econometrics, and Microeconomics I. The PM additionally requires Managing Public Organizations, Public Administration, and Public Finance and Budgeting to learn better ways to improve public service delivery, while students in the PP track must take Cost Benefit Analysis, Introduction to Policy Modeling, and Policy Evaluation to understand policy making and implementation. (https://www.iuj.ac.jp/gsir/pmpp/)	The IPPP is a one-year mid-career program, designed for diplomats and government officials of countries in Asia, the Pacific, and around the world. It is a program designed in collaboration with the Japan International Cooperation Agency (JICA). Students in this program will choose their concentration area, either "International Affairs" or "Public Policy", depending on their professional backgrounds and career goals, and study various discipline-related courses in respective fields. The program will not only encourage students to look back on and systematize their professional experiences, but also develop them into a body of knowledge with which they can further their professional capabilities. The program will also help students to develop their ability to think about and discuss various international public policy issues from long-term, broad, and diverse perspectives. (https://www.iuj.ac.jp/gsir/ippip/)	The JGDP is a two-year master's program offered jointly by the GSIR and GSIM to provide students the opportunity to learn universal development and growth logic in the fields of politics, economy, and management, using Japan's experiences in economic development and corporate growth as basic case materials. The JGDP is not intended as a program to train Japan specialists. The logic and lessons from Japan's experience, both successes and failures, from the 19th Century to date will help future leaders from abroad when they have to think about their strategy for development back home. Thus, the logic behind Japan's experience can be applied to various global scenarios. That is why we call this program the Japan-Global Development Program. The JGDP enables Japanese students to explain their country's development logically when they go abroad and helps them to play an active role as global leaders. (https://www.iuj.ac.jp/jgdp/)	As the first US-style business school in Japan, IUJ's MBA program has bridged management thinking between international and Japanese business communities. It has helped international students access Japanese job markets, and Japanese companies expand their business to global markets. Leading in the fast-changing environment, it has developed the latest rigorous ideas and disseminated them widely. As a result, the program has earned many recognitions from outside accreditors like the Economist's "Best Business Schools" and AACSB International. (https://www.iuj.ac.jp/gsim/mba/)	The COVID pandemic and rapid digitalization of business processes are inducing a paradigm shift in the way we conduct business. Corporations are placing increasing emphasis on environmental, social, and governance (ESG) issues. The post-COVID-19 business environment requires managers to be cognizant of ESG issues and integrate them in business performance. IUJ's IMBA program prepares future leaders to meet these new challenges. The 12-month IMBA program curriculum is compact, rigorous, and demanding. We believe in building core competencies that enable managers to deep dive into innovative business solutions for their businesses. At IUJ, cases are used to better prepare managers to apply what they have learnt to real business situations. The cases focus on issues in both advanced economies and emerging markets in Asia, Africa, and Latin America. At IUJ, students from diverse nationalities work, play, and learn together on a daily basis in an international environment. (https://www.iuj.ac.jp/gsim/imba/)	Our DXP trains future managers with particular strengths in the technology domain. Digital Transformation (DX) is not just a matter of implementing novel digital solutions. We envision you being an "orchestra conductor" for DX projects. You will be competent in leveraging the latest technology trends and forging technical blueprints. As a change agent, you will also consider business factors present in your organization, such as strategies, marketing, people, and the environment. You will be able to talk to every functional leader about your DX plans. Finally, you will fine-tune all of them into a transformation. Many paths are in front of you after you graduate from this program. You might become a manager who wants to make the most of digital technology, an IT specialist who consults on technology projects, or an entrepreneur who starts a tech business.
