

The UK Product Security and Telecommunications Infrastructure (Product Security) regime

The UK's consumer connectable product security regime is mandatory from 29 April 2024. Businesses involved in the supply chains of these products will need to be compliant with this legislative framework from that date.

These minimum security requirements are based on the UK's [Code of Practice for Consumer IoT security](#), the leading global standard for consumer IoT security ETSI EN 303 645, and on advice from the UK's technical authority for cyber threats, the National Cyber Security Centre.

The regime will also ensure other businesses in the supply chains of these products play their role in preventing insecure consumer products from being sold to UK consumers and businesses.

The regime comprises two pieces of legislation:

- [Part 1 of the Product Security and Telecommunications Infrastructure \(PSTI\) Act 2022](#); and
- [The Product Security and Telecommunications Infrastructure \(Security Requirements for Relevant Connectable Products\) Regulations 2023](#).

The PSTI Act received Royal Assent in December 2022. The government published a full draft of the PSTI (Security Requirements for Relevant Connectable Products) Regulations in April 2023 and these regulations were signed into law on 14 September 2023 and is mandatory from 29. April 2024.
