

DIRT BUSTERS

WOODEN FLOOR SCRUBBING

During scrubbing, both the oil layer and any dirt embedded in the oil are removed by using a polishing machine. If the floor underneath is completely clean and a new layer of oil is applied, the floor will appear like new again.

However, the result may be unsatisfactory in the following cases:

1. If the floor was previously oiled while dirty.
2. If the floor has scratches or deeply ingrained (greasy) stains; in such cases, the floor must be sanded.
3. If the floor has undergone a whitewash treatment.
4. If the floor has been treated with oil in localized areas.
5. If the wood is worn or has dried out to a point where it no longer absorbs oil.

So it's key to know the history of the floor.

Color Difference

Wooden floors that are older than six months cannot be treated in small sections without causing a color difference. Therefore, the floor must be treated continuously from wall to doorstep (in some cases, installing a doorstep may be a practical solution).

Furniture

The room(s) where the floor is being treated must be free of furniture, and the floor must be dust-free. Upon request, we can move furniture for you from one room to another. This service involves additional costs and is performed entirely at the client's risk.

Costs

- **Scrubbing and Oiling:** €13,50 per m² (excl. 21% VAT + parking costs)
- **Sanding and Oiling:** €32,50 per m² (excl. 21% VAT + parking costs)
- **Oiling Only:** €3,50 per m² (excl. 21% VAT + parking costs)

Please note that there is a drying time of at least 12 hours during which the floor should not be walked on.
