Österreichischer Sachstandsbericht Klimawandel 2014

The AAR14 is the first Assessment Report on climate Change in Austria assessing the Impact of climate change and the Needs and possibilities of mitigation and Adaptation. This three-volume Report, developed through a multiple peer-Review process including stakeholder participation, presents a coherent assessment of scientific knowledge about climate and makes it accessible for both decision-makers and the General public. Approximately 240 scientists from 50 institutions have participated in this national Assessment Report

Effects of Densification on Urban Microclimate—A Case Study for the City of Vienna

Article | Full-text available | Apr 2021

Wolfgang Loibl · Milena Vuckovic · Ghazal Etminan · [...] · Doris Österreicher

Climate adaptation, mitigation, and protecting strategies are becoming even more important as climate change is intensifying. The impacts of climate change are especially tangible in dense urban areas due to the inherent characteristics of urban structure and materiality. To assess impacts of densification on urban climate and potential adaptation...
