ELEMENTI DI STRUTTURA
STRUCTURAL ELEMENTS
ELÈMENTS D'ÉTAYAGE
ELEMENTOS ESTRUCTURALES

I profili di alluminio per la realizzazione di strutture rappresentano il sistema più economico e flessibile oggi a disposizione. L'uso di questi profili permette di avvicinare il lavoro di montaggio a quello di progettazione, infatti come il progettista compone le strutture con i profili e i numerosi accessori offerti dalla LTA, così il montatore compone la struttura nello stesso modo con cui è stata progettata.

Vengono così superati tutti i problemi di preparazione dei dettagli da saldare, di deformazioni, di pulitura delle saldature, di stabilizzazione dei basamenti, di lavorazioni meccaniche, e di verniciatura.

Altra caratteristica di rilievo è la flessibilità che offrono questi profili. Le strutture realizzate possono essere modificate in qualsiasi momento.

È possibile aggiungere o togliere elementi senza intervenire con saldatrici o altri utensili che risultano difficoltosi da usare a telaio finito o addirittura a macchinario funzionante. È possibile inoltre riutilizzare gli elementi e gli accessori che vengono tolti dalle strutture.

La LTA mette a disposizione degli utilizzatori gli elementi per una veloce realizzazione di tutti i tipi di strutture offrendo la sua vasta gamma di profili dalle notevoli caratteristiche di rigidità, numerosi sistemi di ancoraggio, e tutti gli accessori.

La LTA mette inoltre a disposizione dei clienti un attrezzato centro di taglio e montaggio.

Les profilés en aluminium pour la réalisation de structures représentent le système le plus économique et flexible aujourd'hui disponible. L'utilisation de ces profilés permet d'approcher le travail de montage à celui du projet; en effet, tandis que la personne préposée au projet compose les structures en se servant des profilés ainsi que des nombreux accessoires que propose LTA, le personnel chargé du montage compose la structure de la même façon dont elle a été projetée. Ainsi, il est possible de résoudre tous les problèmes liés à la préparation des pièces à souder, aux déformations, au nettoyage des soudures, aux stabilisations des soubassements, aux réalisations mécaniques et au vernissage. Une autre caractéristique importante concerne la flexibilité offerte par ces profilés. Les structures réalisées peuvent être modifiées à n'importe quel moment. Il est possible d'ajouter ou ôter des éléments sans pour autant avoir besoin de souder ou d'intervenir avec d'autres ustensiles difficilement utilisables sur un châssis fini ou bien même sur une machine en état de fonctionnement. En outre, il est possible d'utiliser à nouveau les éléments ainsi que les accessoires ôtés des structures.

LTA met à la disposition des usagers les éléments nécessaires à la réalisation rapide de tout genre de structure en proposant sa vaste gamme de profilés aux solides caractéristiques de rigidité, ainsi que de nombreux systèmes d'ancrage et tous les accessoires. En outre, LTA met à la disposition de ses clients un centre complet de coupe et montage.

Aluminum profiles are today the cheapest and most flexible available way to produce structures. Using our profiles you can combine assembling and planning, because the designer can plan a structure, using the profiles and the various accessories supplied by LTA, and the fitter builds it as planned and designed. In this way all problems concerning the preparation of parts to be welded are avoided, including deformation, cleaning of welds, stabilization of bedplates, mechanical processes and painting. Flexibility is another remarkable feature of our profiles. Structures made of profiles can be modified at any time. You can add and/or remove some elements, without using welding machines and similar tools, which are difficult to use when the frame has been completed, or even when the machine is running. Furthermore, elements and accessories taken off structures can be used again.

LTA offers a series of elements to build any type of structure within a short time, including rigid profiles, various fastening systems and the relevant accessories. Moreover, LTA offers to its customers the use of a well-equipped cutting and assembling centre.

Los perfiles de aluminio utilizados para la realización de estructuras son el sistema más barato y versátil disponible en el mercado hoy en día. El uso de estos perfiles permite acercar el montaje a la fase de diseño, puesto que el proyectista compone la estructura a través de los perfiles y varios accesorios de LTA y el montador la compone exactamente según el diseño. De esta manera se evitan los problemas relacionados con la preparación de las partes a soldar, las deformaciones, el esmerilado de las soldaduras, la estabilización de la base, los trabajos mecánicos y el pintado. La versatilidad es otra característica de relieve de estos perfiles: las estructuras creadas pueden ser modificadas en cualquier momento. Es posible añadir o eliminar elementos sin utilizar soldadoras u otros útiles, que resultarían difícil que aplicar una vez acabado el bastidor o incluso con la máquina funcionando. Además, es posible reutilizar los elementos y accesorios sacados de la estructura.

LTA brinda a sus usuarios los elementos más aptos para la creación de todo tipo de estructura ofreciendo su amplia gama de perfiles, los elementos más rígidos, distintos sistemas de anclaje y todos los accesorios. Asimismo, LTA pone a la disposición de sus clientes un taller de corte y montaje muy equipado.

Cta

- I profili CTA hanno gli spigoli con un raggio ridottissimo ($R=1.5\text{ mm}$). La giunzione è quasi impercettibile.

Ottimo design. Migliore pulizia.

I profili con i lati chiusi impediscono allo sporco di depositarsi nelle scanalature e nei bordi delle giunzioni.

- Profiles CTA have edges with a low radius ($R = 1.5\text{ mm}$).

The joint is barely noticeable.

Excellent design. Cleaner result.

The profiles with closed sides prevent dirt to settle into the grooves and the edges of joints.

- Les profils CTA ont bords avec un faible rayon ($R = 1,5\text{ mm}$).

L' assemblage est presque imperceptible.

Excellent design. Mieux nettoyage.

Les profils d'empêcher la saleté fermé côtés de régler dans les rainures et les bords des joints.

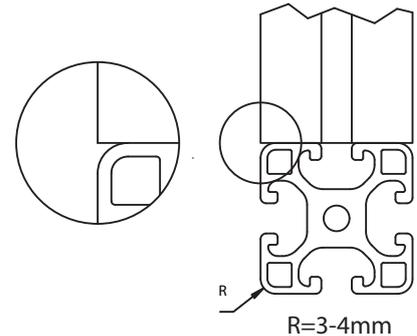

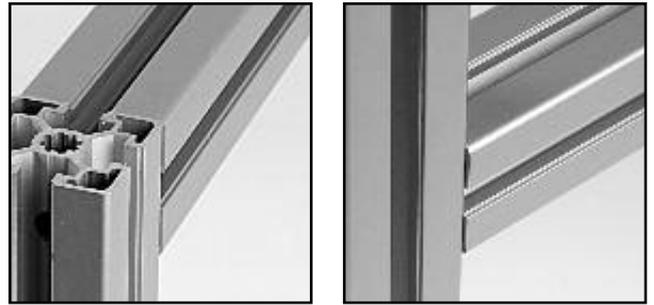

- Los perfiles CTA han bordes con un radio de baja ($R = 1,5\text{ mm}$).

El conjunto es casi imperceptible.

Excelente diseño. Mejor limpieza.

Los perfiles con las partes privadas a resolver impedir la suciedad en las ranuras y los bordes de las articulaciones.

Competitors

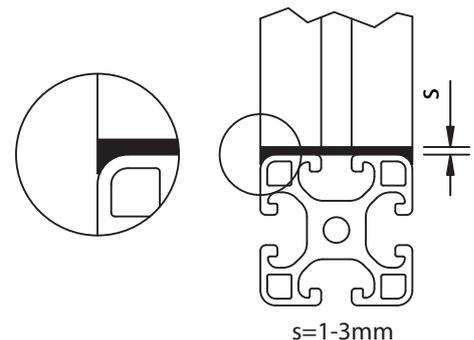

- Altri profili hanno lo spigolo con un raggio di 3-4mm. La giunzione è più evidente e lo sporco si deposita nella giunzione.

- Other profiles have the edge with a radius of 3-4mm. The joint is most evident and dirt is deposited into the edge.

- Les autres profils ont le bord d'un rayon de 3-4mm. L' assemblage est plus évidente et la saleté est déposé dans le bord.

- Otros perfiles tienen el borde con un radio de 3-4mm. El conjunto es más evidente y la suciedad se deposita en el borde.

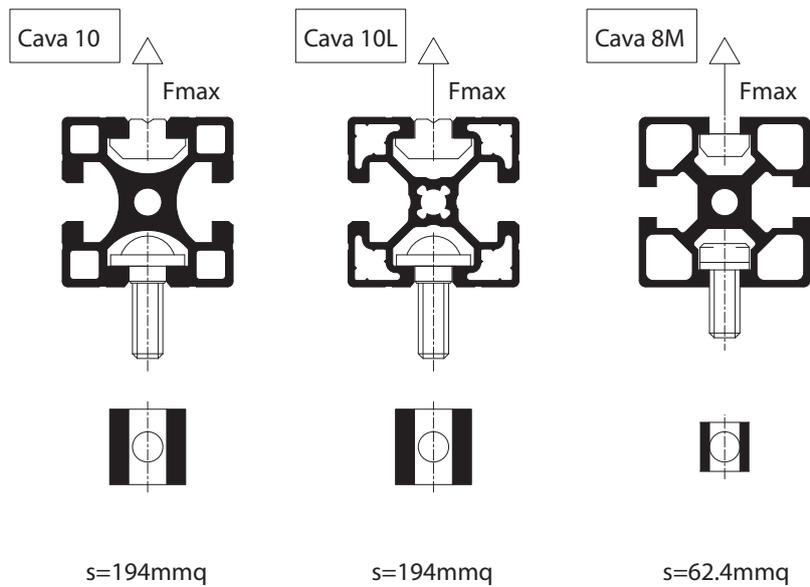

- Per evitare gradini e spigoli vivi bisogna utilizzare compensatori di raggio in materiale plastico. Il carico è considerevolmente ridotto.

- To prevent gap and sharp edges you need to use radius compensator in plastic material. The load is considerably reduced.

- Pour éviter des fentes et les arêtes vives on a besoin d'utiliser un compensation de rayon. Le charge est considérablement réduit.

- Para evitar fendas e bordes afilados necesita utilizar el compensador de radio en material plástico. La carga se reduce considerablemente.

Coppia M(Nm)	Precarico (N)	C10 Tensione unitaria di compressione (N/mm ²)	C8M Tensione unitaria di compressione (N/mm ²)

25	16000	82	256*
30	19500	100	312*

Portata scanalature / Slot load Charge de la rainure / Carga de la ranura

IT – Perché profili cava 10 ?

• Profili cava 8M

La superficie S è $(13 \times 13) - (13 \times 8.2) = 62.4 \text{ mm}^2$

La coppia di serraggio M limite delle viti è 20 Nm; coppie superiori produrrebbero sollecitazioni maggiori del limite elastico del materiale ($R_p 0.2 = 195 \text{ N/mm}^2$) con conseguente deformazione permanente del profilo.

La portata della scanalatura F_{max} è 6000 N (4500 N per serie leggera)

• Profili cava 10

La superficie s è $(20 \times 20) - (20 \times 10.3) = 194 \text{ mm}^2$

Una coppia di serraggio M di 25-30 Nm produce una tensione unitaria di compressione che rimane ampiamente al disotto del limite elastico del materiale; il materiale non si snerva e anche in presenza di vibrazioni non è necessario rinforzare i giunti con squadrette aggiuntive.

La portata della scanalatura F_{max} è 15000 N (10000 N per serie leggera)

EN – Why profiles slot 10?

• Profiles slot 8M

The area S is $(13 \times 13) - (13 \times 8.2) = 62.4 \text{ mm}^2$

Tightening torque M limit of the screw is 20 Nm; superiors torque exceed to the proof stress of material ($R_p 0.2 = 195 \text{ N/mm}^2$), with the following permanent deformation of the profile.

The load limit F_{max} is 6000 N (4500 N for light series)

• Profiles slot 10

The area S is $(20 \times 20) - (20 \times 10.3) = 194 \text{ mm}^2$

A tightening torque M of 25-30 Nm producing a unit load of compression that remains largely under the limit of the proof stress of the material. The material is not deforming and even in the presence of vibrations not need to reinforcing the joints with additional square.

The load limit F_{max} is 15000 N (10000 N series for light series)

FR – Pourquoi profile rainure 10?

• Profile rainure 8M

La surface d'appui S est $(13 \times 13) - (13 \times 8.2) = 62.4 \text{ mm}^2$

La couple de serrage limite M des vis est 20 Nm; couples superieurs peuve produire stress dans le materiel ($R_p 0.2 = 195 \text{ N/mm}^2$), avec poursuivant deformation permanente du profil.

Le charge de la rainure F_{max} est 6000 N (4500 N pour serie léger)

• Profile rainure 10

La surface d'appui S est $(20 \times 20) - (20 \times 10.3) = 194 \text{ mm}^2$

Un couple de serrage M de 25-30 Nm produit un charge unitaire de compression que reste largement au dessous du limite d' elasticité de matériel, il n'est pas stressé, et meme en presence de vibrations n' avons pas la nécessité de renforcer la jonction avec équerres supplémentaires.

Le charge de la rainure F_{max} est 15000 N (10000 N pour serie léger)

ES – Porque perfiles ranura 10?

• Perfiles ranura 8M

La superficie S es $(13 \times 13) - (13 \times 8.2) = 62.4 \text{ mm}^2$

El par de apriete M limite de los tornillos es de 20 Nm; par superiores producirian tensiones mayores al limite elastico del material ($R_p 0.2 = 195 \text{ N/mm}^2$), con consecuencias de deformacion permanente al perfil.

La carga de la ranura F_{max} es de 6000 N (4500 N para las series livianas)

• Perfiles ranura 10

La superficie S es $(20 \times 20) - (20 \times 10.3) = 194 \text{ mm}^2$

El par de apriete M de 25-30 Nm produce una tension unitaria de compresion que se encuentra ampliamente abajo al limite elastico del material; el material no se deforma y tambien, en presencia de vibraciones, no es necesario reforzar las juntas con escuadras adjuntivas.

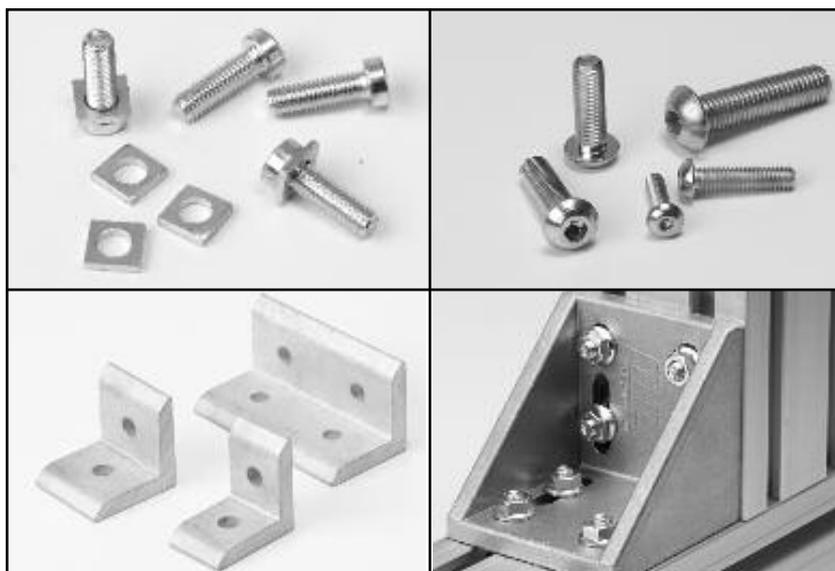

La carga de la ranura F_{max} es de 15000 N (10000 N para las series livianas)

Dimensions de la rainure / Dimensione de la ranura

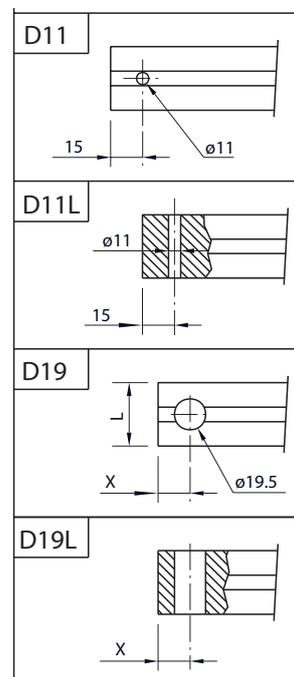

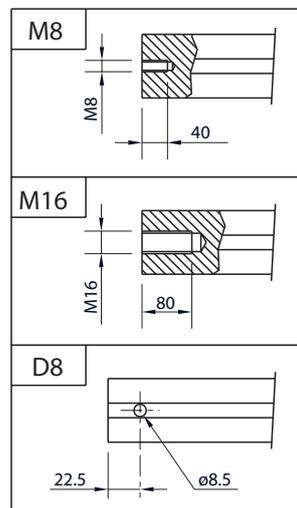

Se desiderate eseguire personalmente la lavorazione, i fori di testa vanno filettati esclusivamente con maschi a rullare (v. cap. 8.1 p. 60).
A richiesta è anche possibile fornire barre di lunghezza diversa dallo standard fino a max 7,2 metri.

If you wish to execute the finishing yourself, we offer appropriate thread formers (see cap. 8.1 p. 60).
On request, we can supply profile bars longer than standard, until the maximum length of 7,2 meters.

Si vous préférez effectuer l'usinage des extrémités des profilés vous-même, vous trouverez les taraudes appropriés à la page 60 cap. 8.
Sur demande, les barres peuvent être livrées plus long de la longueur standard, jusqu'à 7,2 metres.

Si usted desea realizar el mecanizado de extremos en su taller, en la página 60 cap. 8.1 encuentra las roscadoras para ello.
A pedido, se pueden haber bárras de longitud diversa de lo estándar hasta 7,2 m.

LA CERNIERA È CORREDATA DI PERNI ANTIROTAZIONE CHE PERMETTONO L'ALLINEAMENTO ORIZZONTALE O VERTICALE SULLE CAVE DA 8 O DA 10.

LA CERNIERA VIENE FORNITA COMPLETA DI VITI.

THE HINGE IS PROVIDED WITH PINS WHICH ALLOW A HORIZONTAL AND VERTICAL ALIGNMENT ON THE PROFILES SLOTS OF 8 OR 10.

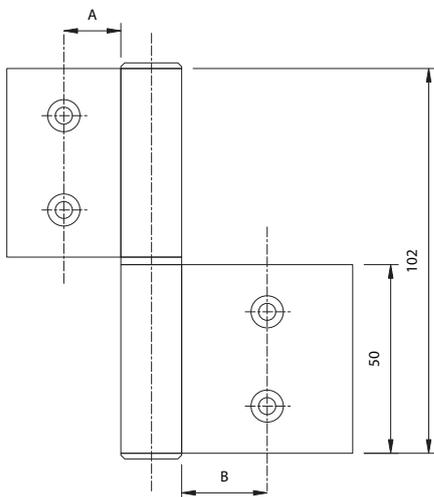

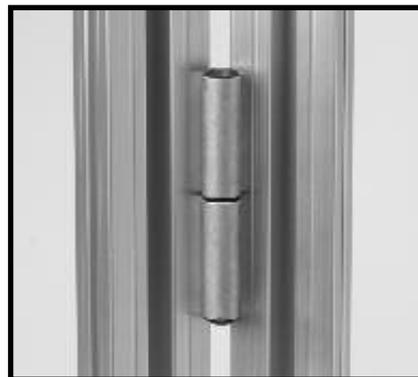

STANDARD SUPPLY INCLUDES SCREWS.

LA CHARNIÈRE EST ÉQUIPÉE AVEC DES TOURILLONS D'ANTI-ROTATION CHE PERMETTENT UN ALIGNEMENT HORIZONTAL E VERTICAL SUR LES RAINURES DU PROFILÉ DE 8 E 10.

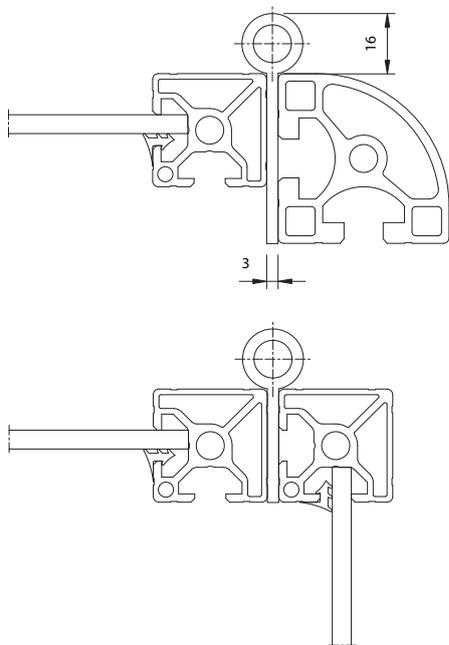

LA CHARNIÈRE EST FORNI AVEC LES VIS.

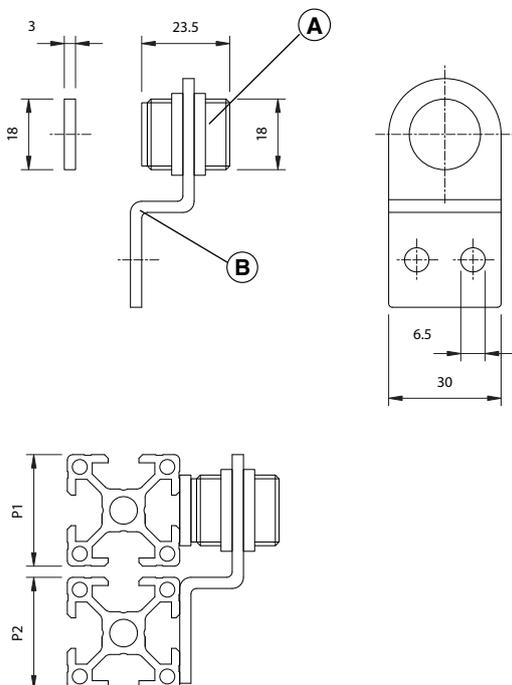

LA BISAGRA ES SUMINISTRADA COMPLETA DE PERNOS ANTI-ROTACIÓN QUE PERMITEN UN ALINEAMIENTO EN LAS RANURAS DE 8 O DE 10.

EL SUMINISTRO INCLUYE LOS TORNILLOS.

Aluminium Piping System

Maggiori informazioni: www.aluair.com
 More information: www.aluair.com
 Plus d'informations: www.aluair.com
 Mayores informaciones: www.aluair.com

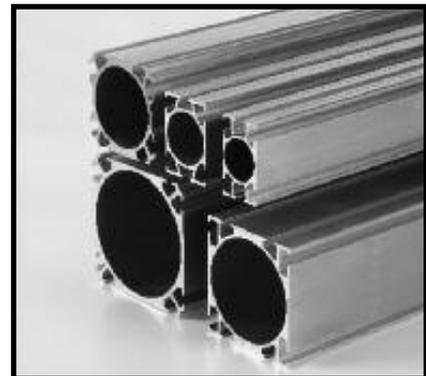

Il sistema AluAir è una soluzione innovativa e di alta qualità per la distribuzione dell'aria, del vuoto e di altri fluidi. Esso è composto da barre di profilato d'alluminio estruso a sezione rettangolare, caratterizzato esternamente da una serie di cave a "T" ed internamente da una cavità in cui passano i fluidi. La caratteristica principale è la modularità, che garantisce da un lato un elevato grado di flessibilità e dall'altro una estrema facilità nella progettazione e nel montaggio.

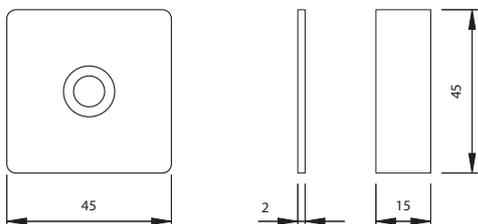

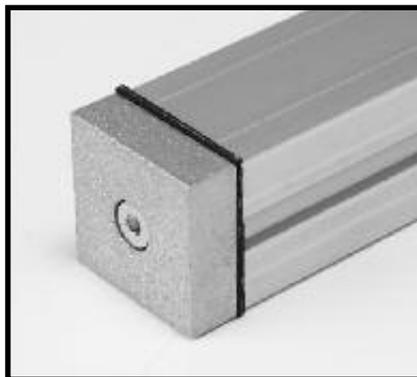

The AluAir system is an innovative and high quality solution for the distribution of the compressed air, vacuum and other fluids. It is composed of beams of aluminium profiles with a rectangular section, characterized by a "T" cavity in the external surface and by a "round section" cavity inside. The main feature are the modular elements, that guarantee a high grade of flexibility and an easy way to project and to assemble the structure itself.

Le système AluAir est une solution innovante et de haute qualité pour la distribution de l'air comprimé, de vide et d'autres fluides. Elle est composée de profilés en aluminium avec une section rectangulaire, caractérisée a l'extérieur par une série de rainures a "T" et a l'intérieur par une cavité dans laquelle les fluides passer. La principale caractéristique est la modularité, ce qui garantit d'une part un haut niveau de flexibilité et dans l'autre un extrême facilité dans la conception et l'assemblage.

El sistema Aluair es una solución innovativa de alta calidad para la distribución del aire, del vacío y de otros fluidos. El sistema esta compuesto por barras de perfiles de aluminio extrudidas de forma rectangular, que exteriormente muestra una serie de ranuras en forma de "T" y internamente se encuentra la cavidad en donde pasan los fluidos. La característica principal de este producto es su modularidad, que garantiza por un lado un elevado grado de flexibilidad y por el otro, una extrema facilidad de proyectación y de instalación.
