

## Leasing - Purchase on account - Rent

We would be pleased to make you an attractive offer tailored to your needs

Unlimited possibilities!

Tactical shooting training up to 270° degrees, thanks to separate, mobile bullet traps for short or long guns.

## SAFETY AND QUALITY

TARGETMASDR™ is protected against accidental bullet impact into the frame. Certified ricochet and rebound protection eliminates dangerous fragments of shrapnel. Accordingly, the plant remains in good external condition.

The screen ensures optimum image reproduction and shines with a service life of up to 40,000 rounds.

## MAINTENANCE AND SERVICE

The system is easy to maintain. The regular maintenance mainly refers to the dust and particle cleaning of certain system components. Changing the screen takes just a few minutes. By means of a remote maintenance module, some malfunctions can be corrected and updates uploaded if necessary.

## MODEL SELECTION

Model:	Weapon typ	Projectile energy
<b>PREMIUM</b>	Long weapon	2500 Joule*
<b>PROFESSIONAL</b>	Short weapon	1500 Joule
<b>SOFTAIR</b>	SOFTAIR / CO <sup>2</sup>	7 Joule

\* Kaliber .223 / 5.56x45mm Nato

## APPLICATIONS / NETWORKING

	TARGETMASDR	Monitor / Touchscreen
240V current	yes	240V current / HDMI, USB
Fixed installation	yes	yes
Mobile application	yes	Accu / WLAN
Autarky	Acc	Accu / WLAN

## ACCESSORIES

Mobile bullet trap  
 - short weapon bis 1500 Joule  
 - long weapon bis 2500 Joule (.223 / 5.56x45 Nato)

## SPECIFICATIONS

Weapons and ammunition	EO=1500 / 2500 joules
Bullet velocity	VO=1200m/sec.
Firing cadence	12 rounds/sec.
Shooting distance	2.5m - 45m (physically/digitally)

## MOBILE FIREARMS TRAINING SYSTEM

**Pioneering technology  
 for sustainable  
 training processes**

## COST OPTIMIZATION

TARGETMASDR™ is a new type of mobile shooting training system with digital hit scoring. The system is designed for the use in existing indoor shooting ranges and offers optimal conditions for professional, static or dynamic, tactical shooting training with short and long guns up to 2500 joules. Substantial time delays due to constant back and forth, taping of the firing holes, etc. are completely eliminated. A welcome and long-awaited time and cost optimization.

More time = More training!

## TRAINING MANAGEMENT

TARGETMASDR™ helps streamline and optimize the systematic training process for instructor-led training or self-training by providing a more efficient way to design, manage and monitoring shooting training.

## FLEXIBILITY

The system is suitable for individual, team and group training. The shooting program can be individually controlled by the shooter or instructor using an operator monitor. TARGETMASDR™ is ideal for dynamic, tactical shooting training up to 270° degrees. As a multiple system, individual danger- or training scenarios can be created by positioning the systems accordingly. The ideal shooting distance is between 2.5-25m and can be digitally simulated up to approx. 40 meters if required.

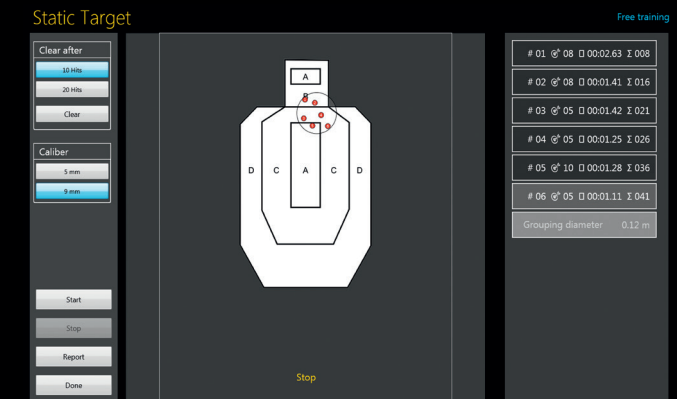

## SHOOTING PROGRAMS / OPTIONS

You can choose between

- static and dynamic targets
- image sequences (duels, multiple targets etc.)
- interactive target images (folding targets)

Various settings and parameters support the program design and optimization.

## TRAINING EVALUATION

The hits are displayed on the target screen and for a detailed analysis on the operating monitor. In addition to the display of the hit pattern, the shot sequence, the score, the split time and the total score are listed there in tabular form. In the image sequences, each shot can be viewed and analyzed in retrospect. After completing an exercise, a scatter circle analysis is automatically performed and the value of the circle circumference is displayed in centimeters.

## TRAINING DATA

After completion of a training sequence, a personalized result report with all necessary information can be generated, saved as PDF, printed or sent by e-mail. Ideal for course participation confirmations of examinations.
