

SCRAMBLUX

SCRAMBLUX

**A new approach to LiDAR
testing and calibration**

info@scramblux.com

The SCRAMBLUX Instrument for LiDAR Testing

SCRAMBLUX has built a LiDAR agnostic test instrument

Our Mission is to deliver a Metric and an Instrument that can follow the LiDAR throughout it's entire lifecycle as the Single Test Standard for LiDAR characterization.

Aftermarket and Periodic Technical Inspection (PTI)

Installation on vehicles (OEM)

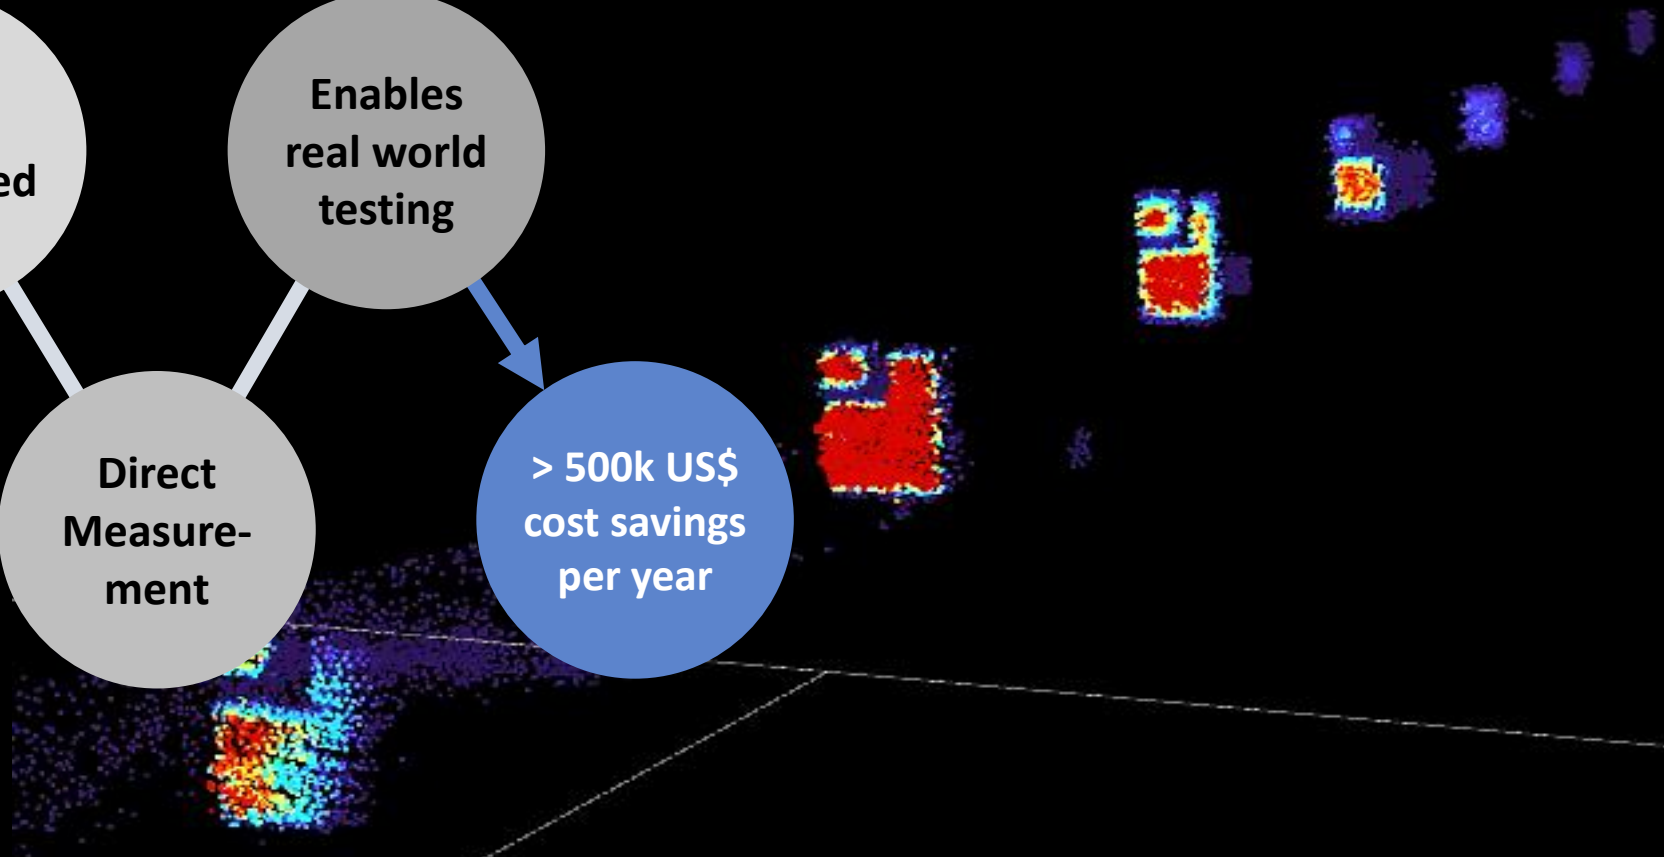

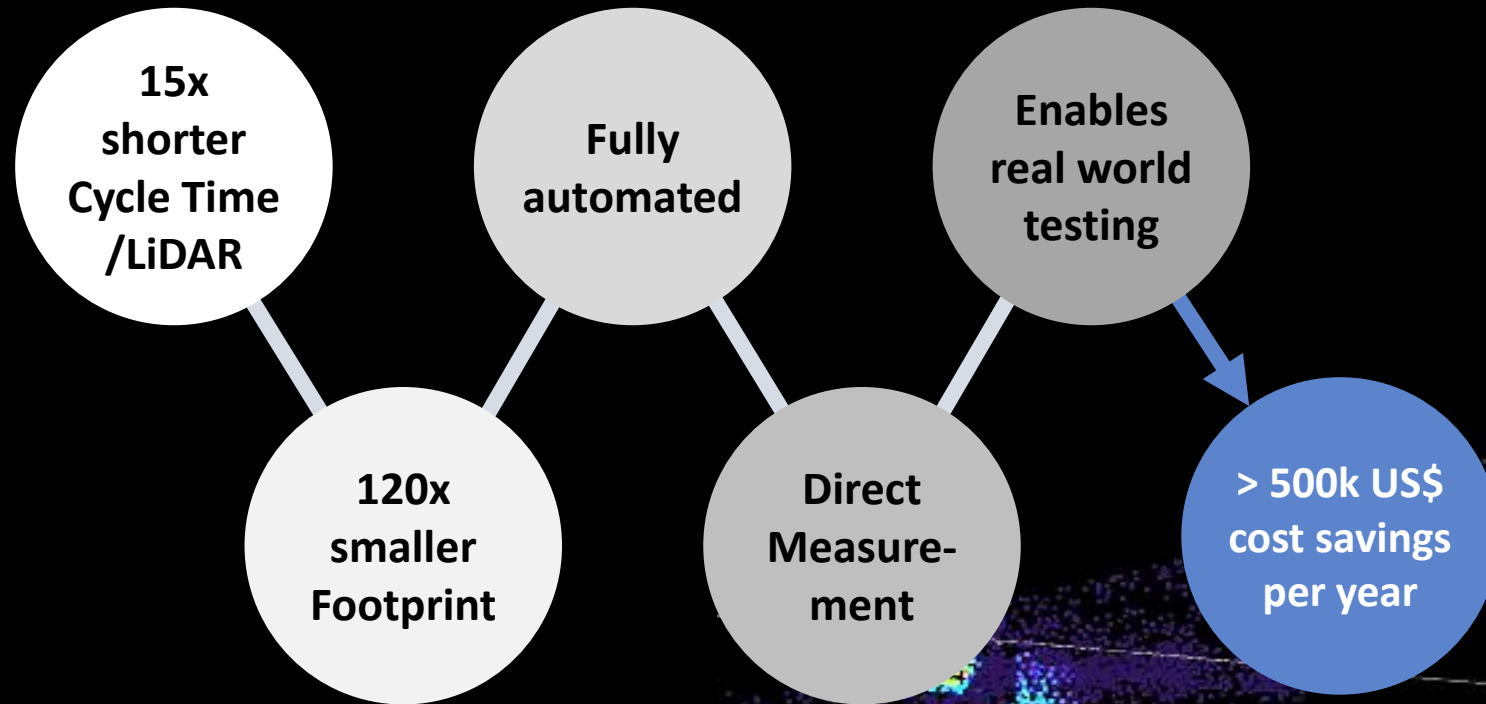

Production (Tier 1/Tier 2)

The SCRAMBLUX BeamScrambler SXI

SXI significantly outperforms all other existing solutions

Our patented Beam Scrambler technology enables us to push the frontiers of **LiDAR testing** and **calibration** technology further than before

What are the SCRAMBLUX Competitors offering?

The SXI significantly outperforms all competitors on the market

Compact Systems

- Fiber based or fully electronic systems
 - **Pros:**
 - Compact systems
 - Requires one operator
 - **Cons:**
 - Indirect measurement
 - Continuous NRE costs
 - Requires motion systems
 - Long Cycle Time/LiDAR

Large Systems

- LiDAR test ranges at factories
 - **Pros:**
 - Can test in real world environment
 - Direct measurement
 - **Cons:**
 - Huge infrastructure and HR investments
 - Tailored solution
 - Long Cycle Time/LiDAR

The BeamScrambler USPs

Ultra-Fast
(CT ≤ 10 sec/LiDAR)

**Compact
footprint**
($\leq 1\text{m}^2$)

**Direct
measurement**
of key performance
parameter

Real-World
environmental
testing

The SXI Roadmap

The LiDAR agnostic SXI evolves as the LiDAR market matures

SCRAMBLUX

ALPHA

- Prototype System
- Production Line Ready
- Ready to test *your* LiDAR

2024

2025

2026

2028++

COMPACT

- Dedicated OEM System
- Module in ViL test jigs
- Smaller footprint
- 4D Scene capable

ONE

- Production System
- Optimized for Production Lines
- Extended Features
- Stand-Alone Development System

X

- Ultra-Compact System
- Intended for workshops during PTI
- Man portable
- Size, Cost & Feature Optimized for Aftermarket

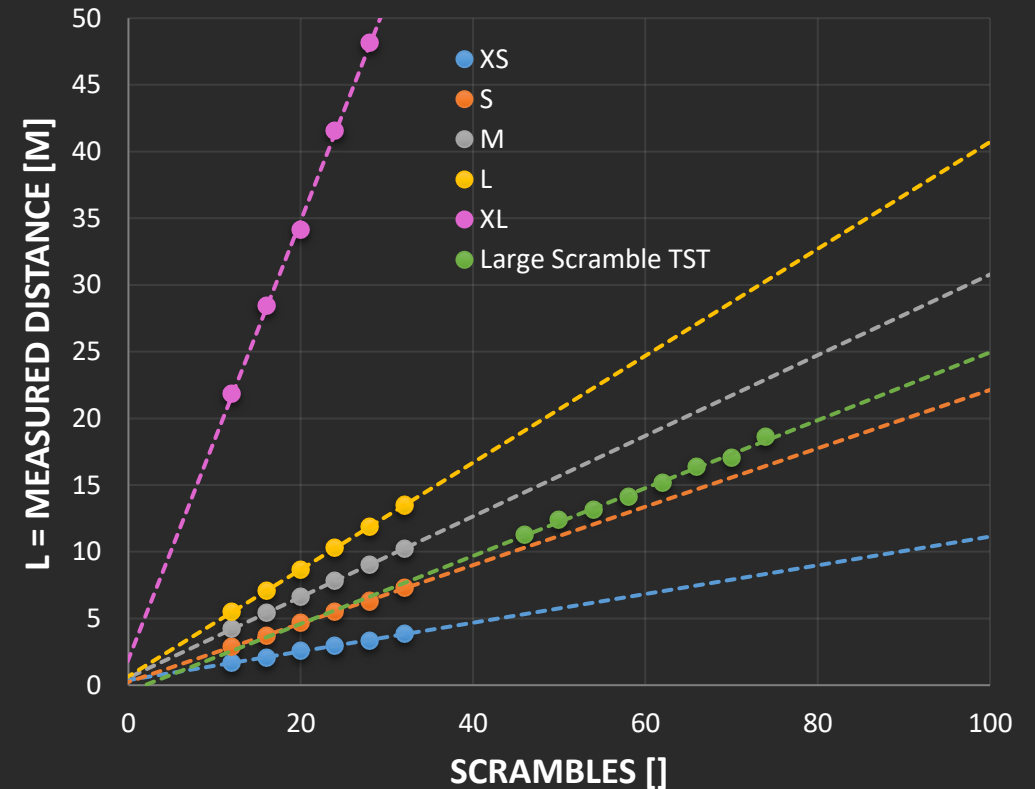

The Principle

We explored the limitations of our instrument with some experiments

- The range scales with scrambles:
→ **Our Technique is linear**
- The performance scales with geometry:
→ **Our Technique is scalable**
- There are **no upper limit** to maximum range: →
Performance is set by cost

Range Exploration

The 3D LiDAR checkered board

We have derived a proprietary LiDAR equation for our instrument

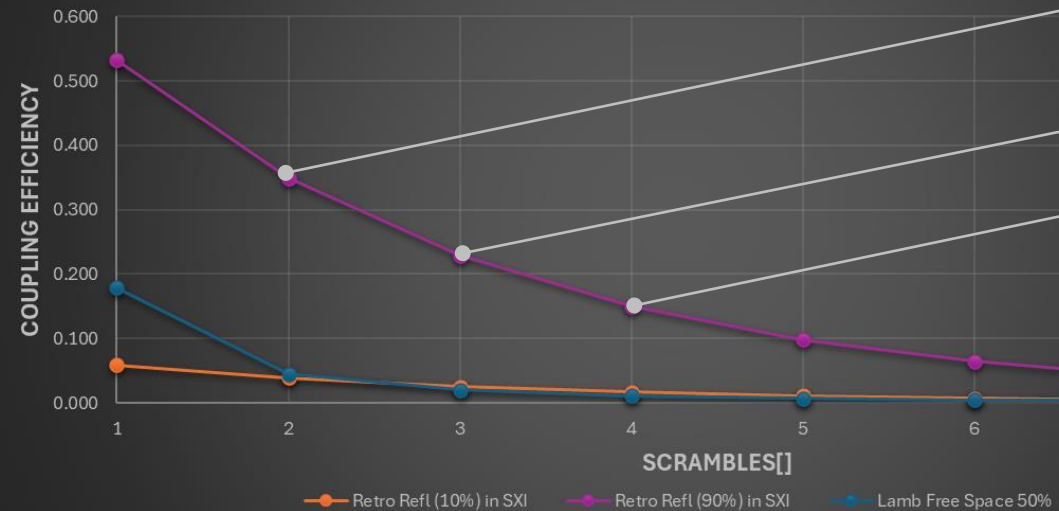

SCRAMBLUX

LERR: Lambertian Equivalent Retro Reflectors

- Lambertian reflectance at any distance/Scramble
- Tunable reflectance of Retro Reflector
- Generate 3D “checkered boards for LiDARs”
 - Series of Equidistant Targets
 - Reflectance scales with depth
- LERR target targets are calibrated to Lambertian in Tunnels and outdoor ranges

Lambertian vs RetroReflector in SXI (S=1.67m)

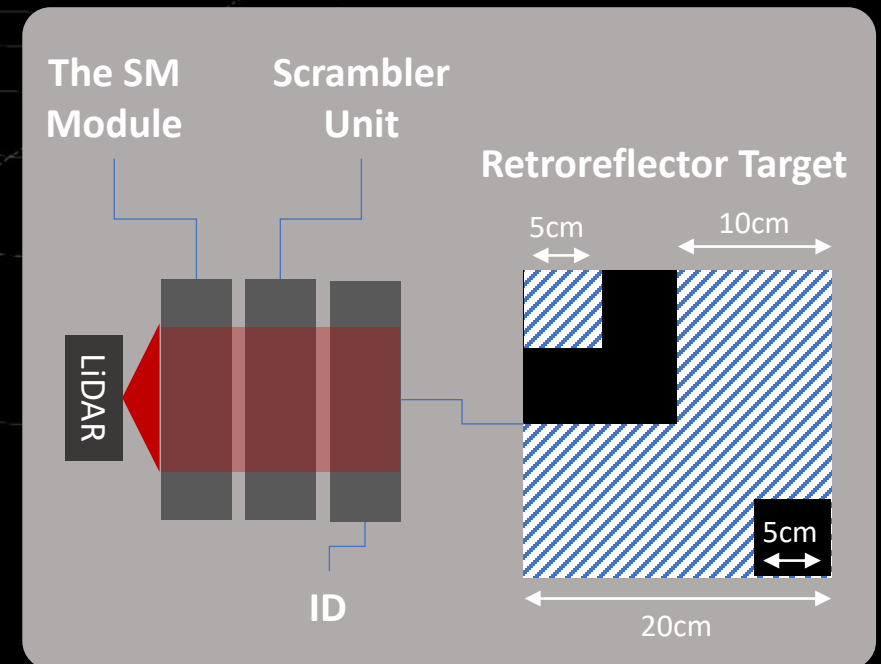

The BeamScrambler SXI

We have built an SXI- α and we offer LiDAR test services in our lab

We have created a 3D Checkered Pattern test target for LiDARs

Parameter	Typical	Unit
Accuracy depth	± 0.01	m
Wavelength	905	nm
Repetition	1.67 ± 0.01	m

The Dynamic LERR

Lambertain Equivalent Retro Reflectors (LERR) in SXI

With LERR we can generate pixelized target planes with programmable reflectivity

Our **LERR model** can be used to build **pixelized targets** and “draw” **dynamic** gray scale scenes for the LiDAR

<https://www.youtube.com/watch?v=6ykdfc8iwcE>

Exploring the 4th dimension

Our system offers beside a 3D scene moving Target/Obstacles

The evolution of our targets is defined by the industry needs

-> FMCW lidar and Sensor Fusion Testing

LiDAR TEST SERVICES

Test YOUR LiDAR in our instrument

Parameter	Min	Max	Typical	Unit
Variable Distance	2 ± 0.003	30 ± 0.003	30 ± 0.003	m
Variable Target Reflectivity	1	90	90	Lambertian Reflectivity %
Angular Resolution	0.001	20	na	°
Radial Resolution	na	na	na	m
FoV Full system	na	40x160	40x160	V°xH°
Tx/Rx Alignment	0.001	na	na	°
0° Alignment	na	na	na	°
Laser Peak Power	0.1	5	5	%
Revisit Rate	0	100	100	%
False Positive Detection Rate	0	100	100	%
Angular Accuracy	0.001	na	na	°
Angular Separability	0.001	na	na	°
False Alarm Rate	0	100	100	%

- We can test YOUR LiDAR in our lab using The SCRAMBLUX alpha
- Test parameters are derived from standards (**DIN-SAE 91471**)
- All LiDAR are tested against same metric using the patented SCRAMBLUX technique
- Your team is always welcome to join in the measurements

The LiDAR EoL Test and Calibration Solution

<https://www.youtube.com/watch?v=fkjfdRfXG0>

Parameter	Min	Max	Typical	Unit
Range	2 ± 0.01	50 ± 0.01	35 ± 0.01	m
Wavelength	500	950	905	nm
Cycle Time	5	15	10	sec
Targets/frame	1	15	8	--

- The SCRAMBLUX Instrument is comprehensive LiDAR End of Line (EoL) **test and calibration solution**
- It enables the use of **the same metric** for testing throughout the life cycle of the LiDAR (Tiers 1,2; OEM; PTI)
- The SXI is **agnostic** to type of scanning beam LiDARs (ToF, FMCW, RMCW)
- **We can test YOUR LiDAR** in our lab using SXI-alpha
