

PRESS RELEASE August 2019, Munich Fun With Balls GmbH - MultiBall

In 2019 the Munich-based Start-Up Fun With Balls GmbH developed MultiBall. A sports gaming console built for the interaction between physical activity and digital games.

MultiBall specifically addresses the challenges in our society concerning the lack of physical activity. The core vision is to innovate the sports world and to give it the cool-factor it deserves. Sports and technology combined with gamification is the key, and the products demonstrate the power of the fun factor in the equation. MultiBall is made to create a playful space and enables people at all ages and skill levels to exercise while they are actually focused on playing live digital games interacting with balls.

The multiple award-winning gaming console MultiBall consists of a console and a sensor frame and requires a video projector to display the video output. The console delivers wide range of games for education, exercise and entertainment using the precision sensor frame to detect ball impacts to control the games.

MultiBall is a stand alone system built for 24/7 usage and is specially engineered for locations like sports centers, educational institutes, exhibitions, shopping malls, and the hospitality industry.

MultiBall creates an easy accessible opportunity to experience sports as pleasure and generates a positive impact on the perception of physical activity.
