

new german waves

The Ocean comes, the waves overthrow our dikes, they wear out our dunes and sandbanks.

Our Situation is serious.

Not only the Maldives are endangered by climate change. The consequences of the climate change are also observable at the North Sea.

The sea levels of the North Sea are rising for over 100 years now.

The Rise has fastened since the End of the 70s.

Professor Jürgen Jensen, Leader of the professorial of Hydromechanics of the University of Siegen, says that the lately recorded Rate of Growth of the Sea Levels are the highest that were ever observed.

He states that might get way worse.

Jacobus Hofstede of the Ministry of Environment Schleswig-Holstein states the our situation is serious and that in a few Centuries we are to expect Coast demolition and the Mudflats might also take damage.

The whole coastline will change.

Many Islands will be flooded and drown and some might disappear completely.

The sea levels are rising.
